

SSP and SWP

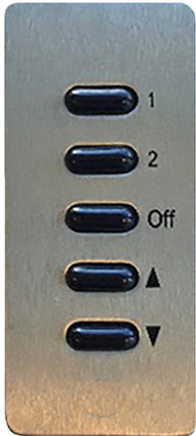

Our Scene Set Plates (SSP) and Switch Plates (SWP) conform to a standard single-gang plate profile, fitting either 25mm surface or flush mounted back boxes.

Control plates have blue LED back lighting for location and scene identification, and scenes can be programmed via a hand-held programmer, wirelessly via Bluetooth from a PC, or by using the buttons on the plate.

Connection to the control network is by CAT5 cable with a push on-male plug to the scene set plate and an RJ11 connector to the network.
